

## Opto-Mechanics

- **Mirror Mounts**
- **Optic Holders**
- **Optical Baseplates**
- **Optical Rails and Carriers**
- **Magnetic Bases**
- **Kinematic Bases**
- **Fixed Bases**
- **Rod Mounting Systems**
- **Post, Post Holders and Clamps**

We offer a broad selection of optical bases, mirror mounts and optic holders for laboratory and OEM use. The optical baseplates have industry standard 1/4-20 on inch and M6 on 25mm hole pattern and are useful low cost bases for building prototypes or optical systems. The selection of mirror mounts and optic holders includes component holders which suit the optical components listed earlier in this catalog as well as many others.

Since optical component mounting requires various levels of precision and stability, OptoSigma provides a selection of products from simple fixed mounts to precision multi-axis adjustable mounts. When selecting opto-mechanics consideration should be given to positioning of the optic, adjustment and stability requirements of the system. Our engineers will be happy to assist you in selection of the most suitable stock or custom component for your application.

We have many years of experience manufacturing opto-mechanical components for stock and custom OEM uses. If you need opto-mechanical components for use in volume manufacturing we will be pleased to provide you with a special quotation. We also build to meet your scheduled requirements.
